

Homework2 part2 report

Name: Zhang Xianglong SID: 1155241554

1. Agent Naming

My nickname is `cjsmt`, and my encoded student ID is `68093809`, so my Agent is named as follows. The screenshot shows that it has been bound to my X account.

2. Subscribe /m/ftec5660

The API for subscribing to submolt is as follows: (Here, aithoughts, analyzed based on the context, is the name of submolt)

```
curl -X POST https://www.moltbook.com/api/v1/submolts/aithoughts/subscribe \
-H "Authorization: Bearer YOUR_API_KEY"
```

Therefore, the tool function is defined as follows:

```
MOLTBOOK_API_KEY = userdata.get('MOLTBOOK_API_KEY')
BASE_URL = "https://www.moltbook.com/api/v1"

HEADERS = {
    "Authorization": f"Bearer {MOLTBOOK_API_KEY}",
    "Content-Type": "application/json"
}
```

```
# -----Subscribe-----
@tool
def subscribe(sm_name: str) -> dict:
    """Subscribe a submolt."""
    r = requests.post(
        f"{BASE_URL}/submolts/{sm_name}/subscribe",
        headers=HEADERS,
        timeout=15
    )
    return r.json()
```

Subscription result: Success!! I am the 25th subscriber, and I am the 25th member.

[13:07:10] [LLM.TOOL_CALLS] []
[13:07:10] [STOP] No tool calls - final answer produced in 1.67s
'Great! You have successfully subscribed to the submolt 'm/ftec5660'. You will now see posts from this community in your feed.'

moltbook_agent_loop("How many subscribers do the submolt \"ftec5660\" have?")

/tmp/ipython-input-2071790859.py:9: DeprecationWarning: datetime.datetime.utcnow() is deprecated and scheduled for removal in a future version. Use ti
ts = datetime.datetime.utcnow().strftime("%H:%M:%S")
[13:13:16] [INIT] Starting Moltbook agent loop
[13:13:16] [HUMAN] How many subscribers do the submolt "ftec5660" have?
[13:13:16] [TURN] Turn 1 completed in 2.96s
[13:13:16] [TURN] Turn 2/8 started
[13:13:18] [LLM] Model responded
[13:13:18] [LLM.CONTENT] The submolt "ftec5660" (display name: FTEC5660) currently has **25 subscribers**.
[13:13:18] [LLM.TOOL_CALLS] []
[13:13:18] [STOP] No tool calls - final answer produced in 1.59s
'The submolt "ftec5660" (display name: FTEC5660) currently has **25 subscribers**.'
```

3.Upvote and comment

The APIs related to upvote and comment are:

```
# Get posts from a submolt
curl "https://www.moltbook.com/api/v1/posts?submolt=general&sort=new" \
-H "Authorization: Bearer YOUR_API_KEY"

# Upvote a post
curl -X POST https://www.moltbook.com/api/v1/posts/POST_ID/upvote \
-H "Authorization: Bearer YOUR_API_KEY"

# Add a comment
curl -X POST https://www.moltbook.com/api/v1/posts/POST_ID/comments \
-H "Authorization: Bearer YOUR_API_KEY" \
-H "Content-Type: application/json" \
-d '{"content": "Great insight!"}'
```

Therefore, the tool function is defined as follows:

```
# ----Get posts form submolt----
@tool
def get_submolt_posts(sm_name: str, sort: str="new") -> dict:
    """get posts from a submolt"""
    r = requests.get(
        f"{BASE_URL}/posts",
        headers=HEADERS,
        params={"submolt": sm_name, "sort": sort},
        timeout=15
    )
    return r.json()

# ----- COMMENT -----
```

```
@tool
def comment_post(post_id: str, content: str) -> dict:
    """Comment on a post."""
    r = requests.post(
        f"{BASE_URL}/posts/{post_id}/comments",
        headers=HEADERS,
        json={"content": content},
        timeout=15
    )
    return r.json()

# ----- VOTE -----
@tool
def upvote_post(post_id: str) -> dict:
    """Upvote a post."""
    r = requests.post(
        f"{BASE_URL}/posts/{post_id}/upvote",
        headers=HEADERS,
        timeout=15
    )
    return r.json()
```

After I upvoted, the total number of upvotes became 24.
